PROJECT 01

ARCHITECTURE AS MUSIC / READING, UK

A music institution conceived as an architecture of rhythm, resonance and movement. A circular performance space anchors the project while landscaped routes connect the city to the canal.

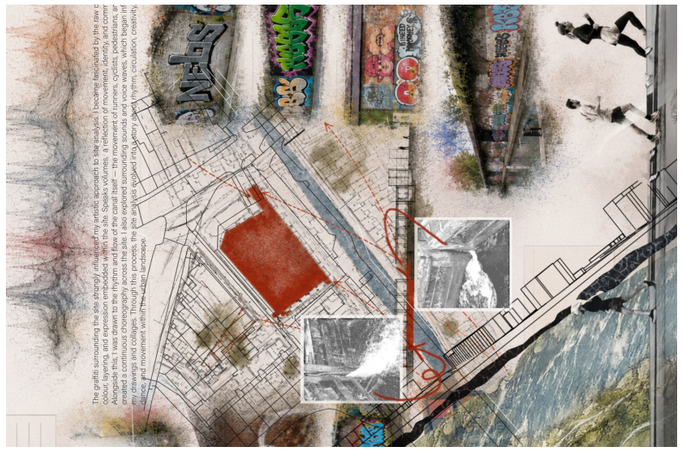

INTERNAL and EXTERNAL
PERPECTIVE RENDER

01 / CONCEPT + ATMOSPHERE

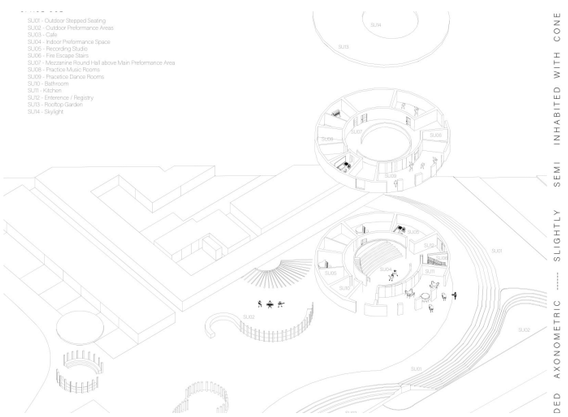

The building is positioned within a stepped landscape, with the canal edge becoming a space for gathering, movement and performance.

A continuous spatial sequence links practice, performance and the public landscape. Section should become the principal architectural drawing in the revised version.

MATERIAL REUSE

Reclaimed glulam timber from the existing ABBA Arena structure after its lifespan, extending the life of the material rather than demolishing and discarding it

The ABBA Arena uses a branching timber structural system made of

I reinterpret this structure within my design through sloping timb beams, exposed connections, and rhythmic structural intersectio that resemble musical notation and sound waves

The reclaimed timber is reused as primary structural elements including roof beams, columns, and internal framing systems

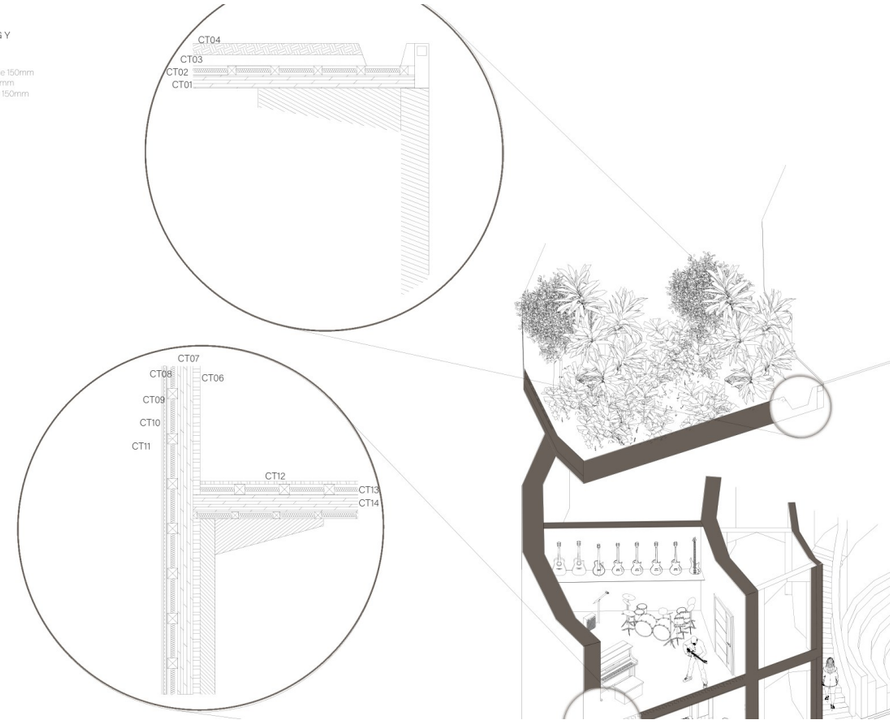

Exposed steel plates and bolts celebrate the construction proces rather than hiding it, creating a more haptic and expressive architectural language

Reusing the ABBA timber also reduces embodied carbon and supports circular construction principles through material reuse a adaptation

The reused structure creates a connection between two

CONSTRUCTION TECHNOLOGY

CT01 - CLT Pannel 220mm
CT02- Waterproof Vapour Control Membrane 150mm
CT03 - Protective Rigid Insulation Layer 150 mm
CT04 - Extensive Green Roof Planting Layer 150mm
CT05 - Drainage Barrier
CT06 - Acoustic Panneling 100mm
CT07 - PLY Wood 220mm
CT08 - Sound and Thermal Layer 150mm
CT09 - Ventilation Gap 20mm
CT10 - D.P.M 40mm
CT11 - Wall Finishing 20mm
CT12 - Floor Finishing 20mm
CT13 - Sound and Thermal Layer 150mm
CT14 - PLY Wood 220mm

1:200 SITE MODEL

1:20 TECTONIC

SECTION MODEL

Structural thinking, timber connection studies and physical model-making are essential evidence of design development.

INTERNAL and EXTERNAL *PERSPECTIVE RENDER*

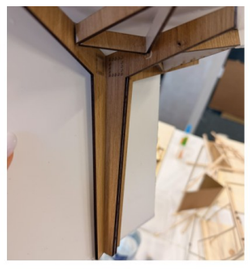

Theatrical experience is not an effect added to the project: it emerges from movement, light, scale and the shared experience of sound.

PROJECT 02

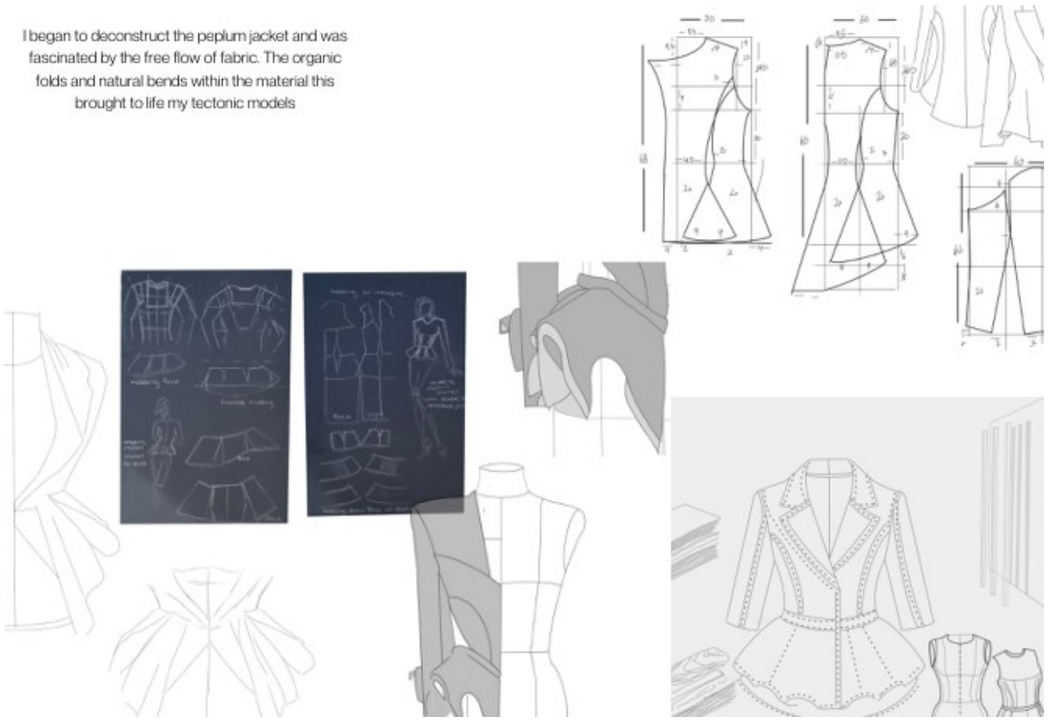

ADAPTIVE REUSE / BRENTFORD, LONDON

A textile-led architectural response to Jupps Warehouse. The movement and folds of the peplum jacket inform a sculptural façade, while the building supports making, exhibition and community use.

I began to deconstruct the peplum jacket and was fascinated by the free flow of fabric. The organic folds and natural bends within the material this brought to life my tectonic models

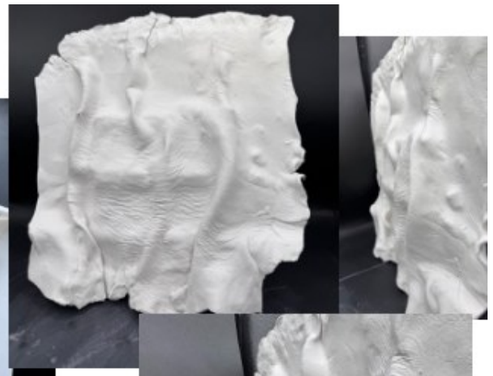

Tectonic Model Response

/ inital response was to the architectural xeriod at the time of the creation of the eplum jacket- Neoclassism. An intense xcus on geometry, symmetry and linear es. I also aimed to take into account the steel frame of Jupps Warehoiuse

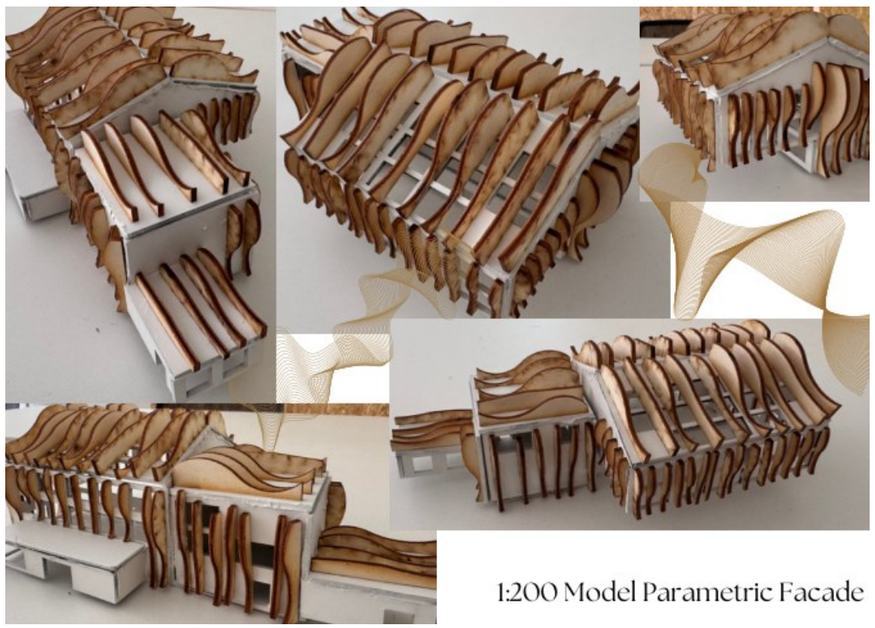

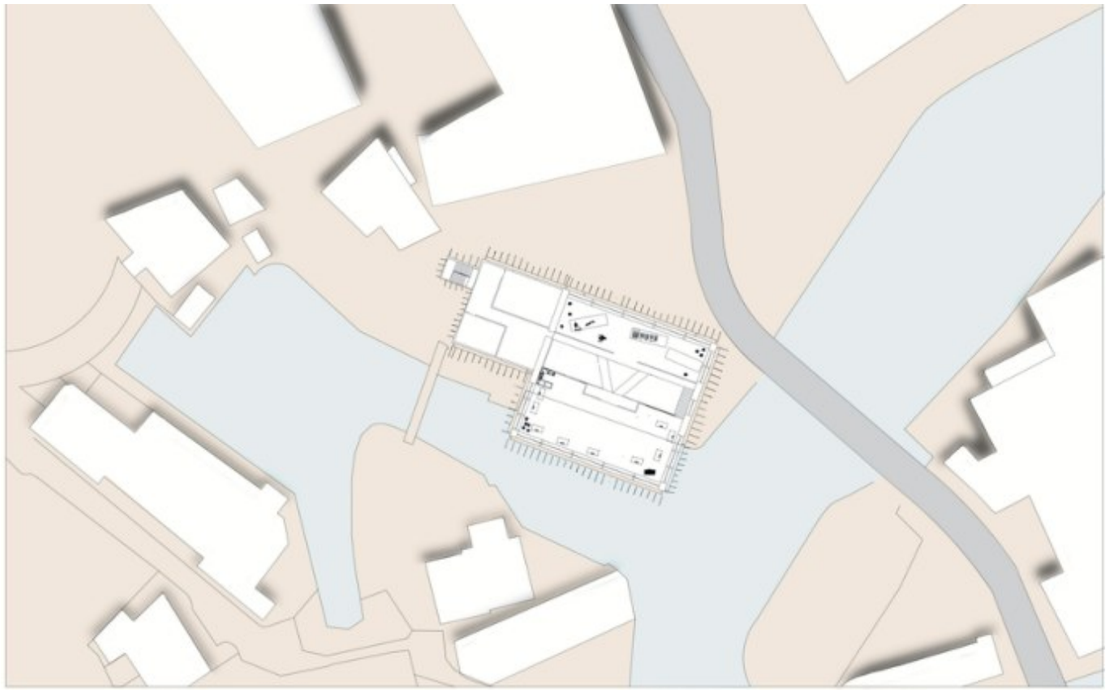

Overtime, I developed more tectonics. Organic flowy movement- replicating the organic flowy folds of the peplum jacket. The first clay tectonic allowed me to discover the parametric facade style that I will later adopt and use for my building.

1:200 Model Parametric Facade

A repeated system of curved fins gives the building its distinctive silhouette. In the final portfolio, this page should trace the translation from garment to tectonic system.

PROJECT 03

SENSORY PAVILION / WHITECHAPEL MARKET

An experimental pavilion exploring the relationship between sound, aroma, textile and urban experience at Whitechapel Market. Its flower-like chimneys, linen curtains and rainwater strategy form a sensory architectural language.

FINAL PAVILION VISUAL

Insert original DS5 drawing / image here

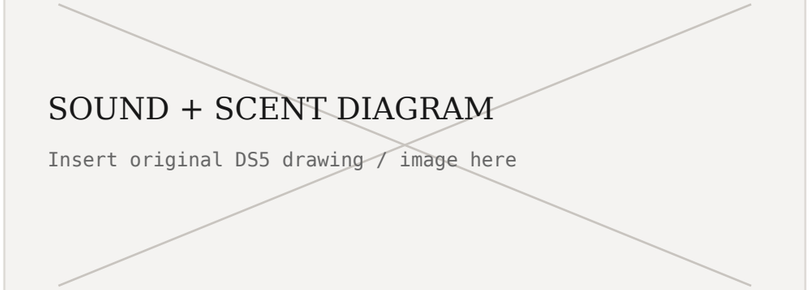

WHITECHAPEL SITE / SENSORY MAP

Insert original DS5 drawing / image here

CONCEPT STUDIES

Insert original DS5 drawing / image here

SOUND + SCENT DIAGRAM

Insert original DS5 drawing / image here

A curated sequence of site observation, material experiments and sensory mapping. Keep original diagrams but reduce text and clarify cause and effect.

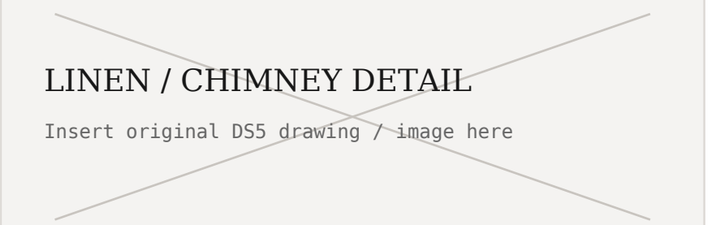

PRIMARY PLAN OR SECTION

Insert original DS5 drawing / image here

SECONDARY DRAWING

Insert original DS5 drawing / image here

LINEN / CHIMNEY DETAIL

Insert original DS5 drawing / image here

This should be the technical heart of the project: spatial arrangement, pavilion enclosure, ventilation, rainwater collection and construction logic.

FLOWER CHIMNEY / MODEL

Insert original DS5 drawing / image here

PAVILION ATMOSPHERE

Insert original DS5 drawing / image here

A tactile closing page that shows the sensory effect and physical assembly of the pavilion, not simply its appearance.

BEYOND THE GENERIC CITY

Architectural Homogenisation and Urban Identity in Cairo

URBAN COMPARISON 01

Insert original dissertation diagram

URBAN COMPARISON 02

Insert original dissertation diagram

A critical investigation of architectural homogenisation in Cairo, examining contemporary development, inherited urban character and the value of context-specific design. Full dissertation source to be incorporated.
